FOREWORD

The Iowa Crop and Livestock Reporting Service is the Iowa unit of a nation-wide organization which is entrusted with the responsibility of operating a standard statistical service for agriculture. The Division of Agricultural Statistics is a division of the Iowa State Department of Agriculture working in cooperation with the Agricultural Marketing Service of the United States Department of Agriculture. The year 1939 marked the one-hundredth anniversary of the collection of statistics of agriculture in the United States.

The general program of the Iowa Crop and Livestock Reporting Service is to meet the public needs and demands for summary data of a historical nature and for current statistical information of agricultural production in Iowa and the United States.

In recent years, there has been an increasing demand from agricultural organizations, commercial interests, teachers, legislators, and county, state and governmental agencies for agricultural data showing the trends of change in counties. Little has been done in the past to make available data for each county over an extended period of time. So urgent is the need for county data that some organizations have assembled such information at considerable cost. It is in response to these needs that this series is being issued.

The county data herein offered have been assembled from existing State and Federal documents and reports, under the supervision of Norman V. Strand, State-wide Work Projects Administration Supervisor of Agricultural Economics and Statistics projects. This is a report of work completed on Official Project 65-1-72-155 of the Work Projects Administration. Official Project 665-72-3-36 furnished the material for Tables 25 and 27.

The Iowa Agricultural Extension Service participated in the preparation of the materials in this report. Selected data from the files of the Iowa Agricultural Experiment Station have been released for publication in this series. Special credit is given to the Iowa assessors and tax officials who collect data on crops and livestock as required under the Iowa laws. Without these data by townships and counties detailed agricultural statistics would be less accurate and less complete.

Leslie M. Carl, Director
Division of Agricultural Statistics

Des Moines, Iowa.
November, 1940.

IOWA AGRICULTURAL STATISTICS - WRIGHT COUNTY

Wright County was established in 1851 and named for Silas Wright, a New York statesman, and Governor Joseph A. Wright of Indiana.

The first pioneer who made a home in the county was Major Anson Brassfield who, in 1854, made a claim on the banks of the Boone River in what is now Liberty Township. S. B. Hewitt and son, and N. B. Paine of Massachusetts settled on the site of Eagle Grove in 1854. The same year, H. B. Martin settled near the mouth of Otter Creek where he laid out the town of Liberty. Settlers also located in many other parts of the county about the same time. 1/

The county was formally organized in 1855, and a paper county-seat was located on the SE₁ of Section 12, Township 91 North and Range 26 West. This site was named Eagleville, but it failed to materialize. In April, 1858, the county-seat was located at Liberty. 2/ The name of Liberty was changed to Goldfield in 1857. In 1886 the county-seat was moved to Clarion and it has remained there since that time. 3/

The first railroad in the county was the old Burlington, Cedar Rapids and Northern, now owned by the Rock Island Railroad Company. It arrived at Clarion in 1881, and later in that year the Chicago and Northwestern Railroad reached Goldfield, having passed through Eagle Grove a few months earlier. 4/

Area.

Wright County is approximately 24 miles square, embracing 575 square miles 5/, or 368,000 acres. Of this number, 358,988 acres are farm land. 6/ There are 16 townships in the county and it ranks twenty-eighth in the State in point of size.

Soils.

The soils of Wright County are grouped into three classes according to their origin and location; namely, drift, terrace, and swamp and bottom-land. The drift soils cover 92.5 percent of the area and are divided into Webster loams--54.6 percent, Carrington loams--24.0 percent, and Clarion loam--22.1 percent. The terrace soils cover 3.5 percent of the surface and are divided into O'Neill loam--1.2 percent, Buckner loam--1.2 percent, Fargo loams--0.6 percent, Waukesha loam--0.3 percent, and Bremer silt loam--0.2 percent. The swamp and bottom-land soils cover 4.0 percent of the surface and are divided into Wabash loams--2.4 percent, muck--0.8 percent, peat--0.7 percent, and gravel pits--0.1 percent. 7/

There are two distinct topographic divisions of the county. A line drawn from the center of the northern boundary to a point five miles west of the south-east corner of the county roughly divides the drift plain to the west from the morainic hills to the east. The drift plain has a level to gently undulating topography. Boone River and its few tributaries have eroded the surface very little and flow through narrow channels. The morainic area consists of a gently to sharply rolling plain, cut by chains of morainic hills. One of these is found northeast of Clarion along the eastern shore of Elm and Cornelia lakes. A small chain branches from this range and extends south about seven miles passing two miles east of Clarion. Another chain branches off west of Dows and extends in a northeasterly direction to the county line. Near Dows there are some isolated hills 40 or 50 feet above the plain level. A chain of shallow lakes extends north and south across the county a little east of the center. The northern and eastern part of the county are drained by the Iowa River and its tributaries. The Boone River drains the county west of the morainic hills. 8/

Climate

The average temperature for 21 years (1909-1930) was 46.3 degrees. The average precipitation for 21 years (1909-1930) was 32.18 inches, and the growing season averaged 145 days between the killing frost dates of May 10 and October 2, recorded from 1909 to 1930. 9/

Population

In 1856 the first State census credited Wright County with a population of 427. It has enjoyed a rather strong and healthy population growth, although the rate of growth decreased considerably after 1900. In 1930 it had a density of 35 persons per square mile, as compared with the State density of 44. The following table shows the number of inhabitants recorded at 10-year intervals:

<u>Year</u>	<u>Inhabitants</u>	<u>Urban</u>	<u>Rural</u>
1860	653	-	-
1870	2,392	-	-
1880	5,062	-	-
1890	12,057	-	-
1900	18,227	7,986	10,241
1910	17,951	8,706	11,245
1920	20,348 <u>10/</u>	11,680 <u>11/</u>	8,668
1930	20,216 <u>12/</u>	10,122	10,094
1935	-	-	9,307 <u>13/</u>

In 1930 the foreign born and native white of foreign born or mixed parentage totaled 7,457 or 36.8 percent of the total population of the county. Of this number, there were 2,292 of Norwegian descent and 1,937 of German descent. Other nationalities had small representations. 14/

Cooperatives

In 1937 there were 13 cooperative institutions in operation in this county--8 elevators, 2 creameries, 1 livestock enterprise, 1 lumber yard and 1 merchandise establishment.

As a whole, they had 2,062 members, of which 1,743 were active, and 5,260 persons did business with the 13 concerns. The selling cooperatives had a business volume of \$1,746,247 and the purchasing cooperatives transacted \$478,452 worth of business.

Cooperatives may both buy and sell or they may perform one or the other function exclusively. Purchasing cooperatives buy non-farm commodities for distribution to their members and patrons, and selling cooperatives market farm commodities for their members and patrons. 15/

Fruit

In 1909, the record year for apples, there were 32,729 trees and 33,477 bushels recorded. In 1934 there were only 8,039 trees and 5,025 bushels reported. The greatest number of plum trees, 10,419, was listed in 1909, but the greatest production, 2,045 bushels, was recorded in 1894. There were 1,779 cherry trees in 1909 and 241 bushels in 1934. These were the years of greatest numbers and greatest production, respectively. The peak year for grapes was in 1909, when 13,926 pounds of grapes were reported. 16/

Note Regarding Yields of Corn

The crop assessors' statistical breakdown for corn acreage is as follows: (1) all corn, (2) corn husked for grain, (3) corn cut for silage, (4) corn cut for fodder and (5) corn hogged off. A total production is given for each farm which includes only that actually husked. In getting county totals of production, the acreage other than that husked is multiplied by the yield (derived by dividing total bushels corn husked by total acres husked) and added to summations of individual farm productions shown as husked. This assumes that acreage not husked would have produced the same yield as that actually husked.

In 1934 and 1936, both poor crop years, separate estimations of corn yield on acreage not husked were made by the State assessors' office because it was felt that farmers in those years would select their best acreages for husking and cut or hog off the rest, which would have a different and lower yield. This separate yield estimation was then multiplied by the acreage not husked and the total added to that reported as husked.

This was done by counties only and not townships. The township yields for these two years, then, are somewhat high since they are based only on acreage husked for grain and bushels husked. The total corn acreage is shown by township with this yield, and any attempt to multiply it by the acreage shown to get total production will result in a too high figure. The county summary table figures for corn yield in 1934 and 1936 have been adjusted for poorer yields on that acreage not husked and these yields may legitimately be multiplied by the acreages shown there to arrive at total productions for the county.

In all other years actual township productions may be derived from the yield and acreage figures shown in the tables since corn yield has been assumed to be equal in all utilizations. The county yield and township yields are, therefore, consistent in all years except 1934 and 1936.

1938	47,544	13,619	8,663	360	10,554	95,626
1939	47,544	13,566	8,108	328	10,594	100,809

The figures in this table for the years 1870-1935 inclusive have been derived from the Federal Censuses for Iowa. These enumerations have been made as of different dates. Some enumerations were for a base date of January 1, others for a base date of April 1, and others for June 1.

The census enumerations made in 1920, 1925 and 1935 were for January 1. For comparability the enumerations made for the base dates of April 1 and June 1 were adjusted to an equivalent January 1 base. This adjustment procedure places the livestock data of the above table on the one inventory date of January 1.

The figures for 1936, 1937, 1938 and 1939 for all cattle and milk cows are estimates of the Division of Agricultural Statistics of the Iowa Department of Agriculture and those for horses, mules, hogs and sheep are adjusted State farm assessors' figures.

The adjusted county figures for horses, mules, hogs and sheep for the last four years in the table are more nearly accurate than those in Table 21 and comparison with these figures will provide an estimate of the bias displayed by the unadjusted State farm assessors' figures.

*Includes Milk Cows.

The statistics in this table are biased downward. They are printed only to permit inter-township and inter-annual comparisons. Unless townships are equal in size, comparisons may not be directly made. It is assumed that individual assessors are subject to approximately the same bias. Compare Table 20 for magnitude of the bias.
